British Ethical Theorists from Sidgwick to Ewing Jun 17 2019

Examines a series of British ethical theorists from the late 19th century to the mid-20th century who shared the view that moral judgements can be objectively true, have a distinctive subject matter, and are known by direct insight.

Global Economic Prospects, January 2019 Jul 31 2020 The outlook for the global economy has darkened. Global financing conditions have tightened, industrial production has moderated, trade tensions have intensified, and some large emerging market and developing economies have experienced significant financial market stress. Faced with these headwinds, the recovery in emerging market and developing economies has lost momentum. Downside risks have become more acute and include the possibility of disorderly financial market movements and an escalation of trade disputes. Debt vulnerabilities in emerging market and developing economies, particularly low-income countries, have increased. More frequent severe weather events would raise the possibility of large swings in international food prices, which could deepen poverty. In this difficult environment, it is of paramount importance for emerging market and developing economies to rebuild policy buffers while laying a stronger foundation for future growth by boosting human capital, promoting trade integration, and addressing the challenges associated with informality,

Global Economic Prospects, June 2020 Dec 16 2021 The COVID-19 pandemic has, with alarming speed, dealt a heavy blow to an already-weak global economy, which is expected to slide into its deepest recession since the second world war, despite unprecedented policy support. The global recession would be deeper if countries take longer to bring the pandemic under control, if financial stress triggers defaults, or if there are protracted effects on households and firms. Economic disruptions are likely to be more severe and protracted in emerging market and developing economies with larger domestic outbreaks and weaker medical care systems; greater exposure to international spillovers through trade, tourism, and commodity and financial markets; weaker macroeconomic frameworks; and more pervasive informality and poverty. Beyond the current steep economic contraction, the pandemic is likely to leave lasting scars on the global economy by undermining consumer and investor confidence, human capital, and global value chains. Being mostly a reflection of the recent plunge in global energy demand, low oil prices are unlikely to provide much of a boost to global growth in the near term. While policymakers' immediate priorities are to

address the health crisis and moderate the short-term economic losses, the likely long-term consequences of the pandemic highlight the need to forcefully undertake comprehensive reform programs to improve the fundamental drivers of economic growth, once the crisis abates. Global Economic Prospects is a World Bank Group Flagship Report that examines global economic developments and prospects, with a special focus on emerging market and developing economies, on a semiannual basis (in January and June). The January edition includes in-depth analyses of topical policy challenges faced by these economies, while the June edition contains shorter analytical pieces.

Global Economic Prospects, January 2020 May 09 2021 Global growth is projected to be slightly faster in 2020 than the post-crisis low registered last year. While growth could be stronger if reduced trade tensions lead to a sustained reduction in uncertainty, the balance of risks to the outlook is to the downside. Growth in emerging market and developing economies is also expected to remain subdued, continuing a decade of disappointing outcomes. A steep and widespread productivity growth slowdown has been underway in these economies since the global financial crisis, despite the largest, fastest, and most broad-based accumulation of debt since the 1970s. In addition, many emerging market and developing economies, including low-income countries, face the challenge of phasing out price controls that impose heavy fiscal cost and dampen investment. These circumstances add urgency to the need to implement measures to rebuild macroeconomic policy space and to undertake reforms to rekindle productivity growth. These efforts need to be supplemented by policies to promote inclusive and sustainable long-term growth and accelerate poverty alleviation. Global Economic Prospects is a World Bank Group Flagship Report that examines global economic developments and prospects, with a special focus on emerging market and developing countries, on a semiannual basis (in January and June). The January edition includes in-depth analyses of topical policy challenges faced by these economies, whereas the June edition contains shorter analytical pieces.

The Will to Punish Jun 29 2020 Over the last few decades, most societies have become more repressive, their laws more relentless, their magistrates more inflexible, independently of the evolution of crime. In *The Will to Punish*, using an approach both genealogical and ethnographic, distinguished anthropologist Didier Fassin addresses the major issues raised by this punitive moment through an inquiry into the very foundations of punishment. What is punishment? Why punish? Who is punished? Through these three questions, he initiates a critical dialogue with moral philosophy and legal theory on the definition, the justification and the distribution of punishment. Discussing various historical and national contexts, mobilizing a ten-year research program on police, justice and prison, and taking up the legacy of Friedrich Nietzsche and Michel Foucault, he shows that the link between crime and punishment is an historical artifact, that the response to crime has not always been the infliction of pain, that punishment does not only proceed from rational logics used to legitimize it, that more severity in sentencing often means increasing social inequality before the law, and that the question, "What should be punished?" always comes down to the

questions "Whom do we deem punishable?" and "Whom do we want to be spared?" Going against a triumphant penal populism, this investigation proposes a salutary revision of the presuppositions that nourish the passion for punishing and invites to rethink the place of punishment in the contemporary world. The theses developed in the volume are discussed by criminologist David Garland, historian Rebecca McLennan, and sociologist Bruce Western, to whom Didier Fassin responds in a short essay.

Public Debt Sustainability in Developing Asia Aug 12 2021

Addressing the global financial crisis has required fiscal intervention on a substantial scale by governments around the world. The consequent buildup of public debt, in particular its sustainability, has moved to center stage in the policy debate. If the Asia and Pacific region is to continue to serve as an engine for global growth, its public debt must be sustainable. *Public Debt Sustainability in Developing Asia* addresses this issue for Asia and the Pacific as a whole as well as for three of the most dynamic economies in the region: the People's Republic of China, India, and Viet Nam. The book begins with a discussion of the reasons for increased attention to debt-related issues. It also introduces fiscal indicators for the Asian Development Bank's developing member countries and economies. The sustainability of their debt is assessed through extant approaches and with the most up-to-date data sources. The book also surveys the existing literature on debt sustainability, outlining the main issues related to it, and discusses the key implications for the application of debt sustainability analysis in developing Asia. Also highlighted is the importance of conducting individual country studies in view of wide variations in definitions of public expenditure, revenues, contingent liabilities, government structures (e.g., federal), and the like, as well as the impact of debt on interest rates. The book further provides in-depth debt sustainability analyses for the People's Republic of China, India, and Viet Nam. *Public Debt Sustainability in Developing Asia* offers a comprehensive analytical and empirical update on the sustainability of public debt in the region. It breaks new ground in examining characteristics that are crucial to understanding sustainability and offers richer policy analysis that should prove useful for policymakers, researchers, and graduate students.

Comparative Human Rights Law Sep 20 2019 Courts in different

jurisdictions face similar human rights questions. Does the death penalty breach human rights? Does freedom of speech include racist speech? Is there a right to health? This book uses the prism of comparative law to examine the fascinating ways in which these difficult questions are decided. On the one hand, the shared language of human rights suggests that there should be similar solutions to comparable problems. On the other hand, there are important differences. Constitutional texts are worded differently; courts have differing relationships with the legislature; and there are divergences in socio-economic development, politics, and history. Nevertheless, there is a growing transnational conversation between courts, with cases in one jurisdiction being cited in others. Part I sets out the cross-cutting themes which shape the ways judges respond to challenging human rights issues. It examines when it is legitimate to refer to foreign materials; how universality and cultural relativity are balanced in human rights law; the appropriate role of courts in adjudicating human rights in a democracy; and the principles judges use to interpret human rights texts. The book is unusual in transcending the distinction between socio-economic rights and civil and political rights. Part II applies these cross-cutting themes to comparing human rights law in the US, UK, South Africa, Canada, and India. Its focus is on seven particularly challenging issues: the death penalty, abortion, housing, health, speech, education and religion, with the aim of inspiring further comparative examination of other pressing human rights issues.

Lifelines Aug 20 2019 Infrastructure—electricity, telecommunications, roads, water, and sanitation—are central to people's lives. Without it, they cannot make a living, stay healthy, and maintain a good quality of life. Access to basic infrastructure is also a key driver of economic development. This report lays out a framework for understanding infrastructure resilience - the ability of infrastructure systems to function and meet users' needs during and after a natural hazard. It focuses on four infrastructure systems that are essential to economic activity and people's well-being: power systems, including the generation, transmission, and distribution of electricity; water and

sanitation—especially water utilities; transport systems—multiple modes such as road, rail, waterway, and airports, and multiple scales, including urban transit and rural access; and telecommunications, including telephone and Internet connections.

Intermediate Financial Theory Jun 22 2022 The second edition of this authoritative textbook continues the tradition of providing clear and

concise descriptions of the new and classic concepts in financial theory. The authors keep the theory accessible by requiring very little mathematical background. First edition published by Prentice-Hall in 2001- ISBN 0130174467. The second edition includes new structure emphasizing the distinction between the equilibrium and the arbitrage perspectives on valuation and pricing, as well as a new chapter on asset management for the long term investor. "This book does admirably what it sets out to do - provide a bridge between MBA-level finance texts and PhD-level texts.... many books claim to require little prior mathematical training, but this one actually does so. This book may be a good one for Ph.D students outside finance who need some basic training in financial theory or for those looking for a more user-friendly introduction to advanced theory. The exercises are very good." --Ian Gow, Student, Graduate School of Business, Stanford University Completely updated edition of classic textbook that fills a gap between MBA level texts and PHD level texts Focuses on clear explanations of key concepts and requires limited mathematical prerequisites Updates includes new structure emphasizing the distinction between the equilibrium and the arbitrage perspectives on valuation and pricing, as well as a new chapter on asset management for the long term investor
