Between Imitation and Innovation Feb 06 2021 Recent years have seen intense debates among management and academics on the rise of `lean production' and `Japanization'. Some authors have stressed the `universal' impact of new forms of work organization and `best

practice' while others have questioned the limits of convergence, stressed the weight of national contexts or 'societal effects', or highlighted the evolutionary effects of unpredictability in the external environment. The international automobile industry has been a focus for much of this debate and this book, written by a team of leading international researchers in the field, uses this industry to examine in detail the actual practice of the transfer and adaptation of productive models and the trajectories of innovation, compromise, and failure that can result. Case studies cover in detail the Japanese transplant experience in North America, and the global experience of hybrid production systems in Europe, Latin America, and Asia. The book contributes to theoretical discussions about the transfer, adaptation, or convergence of productive models. In particular, the authors argue that direct transplantation or imitation of these models is rarely feasible or even desirable. Systems cannot be transferred without being significantly reshaped. Instead, the book focuses on the process of 'hybridization', the complex interaction of productive models with national and societal effects. Hybridization, it is argued, is inevitable. But this should be seen not simply as a process of compromise and retreat but also as an important dynamic of innovation and learning. This book is from the French-based international research network GERPISA (Groupe d' é tude de r é cherche permanent sur l'industrie et les salaires de l'automobile). See related titles below.

Pacific Cooperation from the Japanese and the German Viewpoint Oct 14 2021 It is hardly possible to overrate the Pacific Basin in its economic and political importance. Currently, it is one of the economic regions with the highest dynamic growth throughout the world. Economically this region is sometimes considered to be the future centre of the world economy often with reference to well-known authors such as Arnold Toynbee and Herman Kahn who predicted the inevitable approach of a Pacific century. The economic development of the Pacific Basin has proceeded far already following Japan's ascent into the position of an economic superpower. Considering the concentration of East and South-East Asian dynamic developing countries the Pacific Basin has meanwhile developed into a regional centre of economic activities. Furthermore the ambitions and interests of three nuclear powers - the USA, the Soviet Union and China - collide in this region. Obviously these countries increasingly perceive and take into account the political and strategic importance of this region.

Crow Feathers Jan 17 2022 The young farmer, shouldering the stock of his double-barrelled shotgun, and sighting, squeezed off both triggers at the flock of crows rising from his field. He was discouraged to see that he had not hit even one of them, though the sun was momentarily obscured and the sky became dark as a storm of feathers fell all around him, and each feather that fell to ground, was, he realised, a tale that had to be told.

Japan's New Imperialism May 29 2020 The spectacular rise of the yen in the mid-1980s has unleashed a new wave of imperialism from Japan. Its origins are traced to a series of crises and rivalries between the two great capitalist powers, Japan and the USA. To escape the high yen, Japanese capital is closing down factories at home and shifting them overseas. Some are going to the advanced countries, but the book's main focus is on the search for cheap labour in Southeast Asia to make parts for Japan's two leading industries: motor vehicles and electronics.

Gale's Auto Sourcebook 2 Mar 19 2022 This book is designed to present, in one convenient source, comments published in periodicals about 325 automobile models manufactured since 1987 on a model-by-model basis. These periodicals range from general interest to specialized sources as well as repair manuals and other publications related to the individual models.

Partnerships for Profit Nov 15 2021 Faced with new levels of savage competition, tens of thousands of companies, including fierce competitors, are sharing their resources and expertise to develop new products, achieve larger scale economies, and gain access to new technology and new markets. These strategic alliances are justifiably hailed by many as the competitive weapon of the 1990s. But because they are blurring and reshaping the very structure and boundaries of corporations in unprecedented ways, the process of designing and managing these alliances confronts managers with the awesome task of inventing theory and practice on a daily basis. Up to now, they have had few places to turn for guidance. In *Partnerships for Profit*, Jordan D. Lewis, an internationally recognized expert on strategic alliances, now provides the first full-scale analysis of this surging global phenomenon. During five years of intensive field research, including 500 interview hours with more than 100 executives from some 40 American, European, and Asian firms, Lewis has observed firsthand some of the most successful strategic alliances and alliance practitioners in the world. Drawing on the experiences of IBM, Fuji Xerox, Ford, Dow Chemical, Intel, Komatsu, Corning, Sony, Apple Computer, Ciba-Geigy, and many other companies, Lewis brilliantly describes in detail how managers at each of these pioneering firms structure and manage various kinds of alliances -- from informal cooperation, minority investments, and risk-sharing contracts to full-fledged joint ventures and strategic networks. Through actual examples, Lewis shows for the first time how alliance partners build trust, develop mutual understandings, and make joint decisions, and at the same time protect core interests and critical technology -- a major concern of direct competitors. Lewis explains how to avoid the "Trojan horse" blunder many American firms made when they gave their Asian manufacturing partners key information about tailoring their products to local preferences. Particularly important is an entire chapter devoted to working with other cultures. The employment of strategic alliances, Lewis concludes, requires nothing short of a revolution in the conduct of business. Unlike arm's length relations, in which initial commitments govern, alliances involve shared risks and ongoing mutual adjustments. Lewis shows how alliances inevitably shape the business strategy of an entire firm, since the decisions to target certain markets and commit resources involve groups of firms acting in concert. Finally, Lewis shows how the use of alliances will affect internal management policies and practices, especially methods to bring about an outward focus and overcome the "not invented here" syndrome. We have entered the age of strategic alliances.
